DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 13-18, 25-30, 40-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's statement of the prior art in view of Stark et al (6520648). For claims 13, 25, 40, the applicant has described the prior art digital display systems using field sequential color techniques that involve spatial light modulators (applicant's prior art fig. 1), but these systems do not have a photo-detector system. However, Stark et al in a related system disclose in col. 5, lines 29-40, a photo-detector (item 162) which delivers timing data to the display controller (item 131), and one would be motivated to incorporate this feature into the prior art because it helps with the synchronization of the frame sequential color data driving the spatial light modulator and this creates better color resolution. For the other claims, the use of transparent substrates and types of electrode placement and types of packaging of the system are standard choices made in the art.
3. Claims 1-12 are allowed.
4. Claims 19-24, 31-39, 44-49 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter:
For the claimed invention in claim 1 having a semiconductor substrate with a photo-detector is

not shown or suggested by the prior art. For the other claims, having a second photo-detector or having a color filtering system for the photo-detector is not shown or suggested by the prior art.
